

directional flow of blood

In the heart, blood flows in certain directions. With the double-pump system, the direction that blood is pumped is dependent on which system it is in.

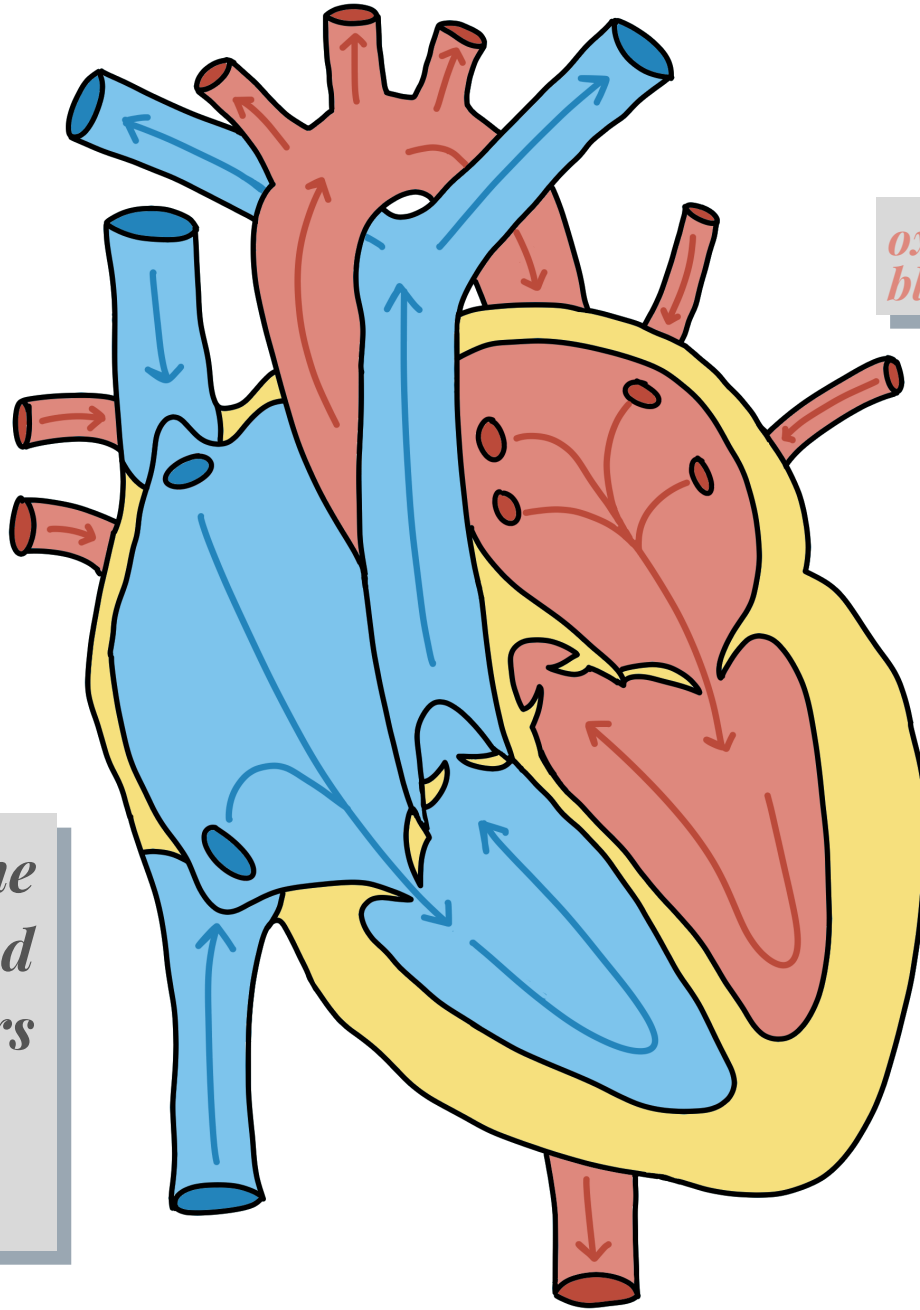

right side

deoxygenated
blood

left side

oxygenated
blood

*no matter the
system, blood
always enters
through
the atria*

remember that diagrams may seem flipped directionally, as they are labelled using the outside point of reference, just like it would face you for inspection
